

DRAINAGE
SOLUTIONS, INC

FALL SEPTIC MAINTENANCE CHECKLIST

BEFORE TEMPERATURES DROP, GIVE THE SYSTEM A SEASONAL ONCE-OVER

Use this quick checklist during fall service visits to identify potential issues before winter conditions make access and repairs more difficult.

ACCESS AND COMPONENTS

Inspect lids, risers, filters and access points for damage.

Check accessible components for signs of leaks or deterioration.

Determine whether the tank is due for pumping based on system conditions and recommended service intervals.

DRAIN FIELD AND WATER MANAGEMENT

Inspect the condition of the drain field.

Verify that grading directs surface water away from septic components.

Keep vehicles, equipment and other heavy loads off the drain field.

Direct roof runoff and other excess surface water away from septic areas.

BEFORE WINTER

Address needed repairs before freezing temperatures make access more difficult.
